

Community Outpatient Penetration Rates - General Population by RSN by Age.

Operational Definition: The proportion of people in the general population who received publicly funded outpatient mental health services in the Fiscal Year by RSN.

Operational Measure: This is calculated by dividing the number of clients who received outpatient mental health services during a Fiscal Year by an estimate of the general population as of April 1st of the Calendar Year by RSN.

Formulas:

$$\frac{\text{Number of clients receiving outpatient mental health services during Fiscal Year by RSN}}{\{0-17, 18-59, 60+\}}$$
$$\frac{\text{Estimate of people in the general population in the Calendar Year by RSN}}{\{0-17, 18-59, 60+\}}$$

Discussion: The penetration rates by RSN and Statewide show the general population by age group for each RSN and the State. The number of youth and adults receiving mental health services has fluctuated while the number of older adults has decreased.

Data Notes:

- All Community Outpatient penetration rates (i.e. count of people receiving service) include clients who receive any outpatient services whether it was reported as an hour or a day of service..
- Population numbers used to calculate penetration rates are taken from Washington State's Office of Financial Management (OFM), which are based on estimates from the 2000 Census (<http://www.ofm.wa.gov/pop/default.asp>).
- Counts are of people, not admissions, episodes, or units of services.
- RSN counts show the number of unduplicated clients within each RSN (i.e. a person is counted once in each RSN where they receive services).
- The State total is unduplicated across all RSNs (i.e. each person is only counted once in the Statewide total even though they can be counted in more than one RSN).
- Age is calculated as of January 1, yyyy for each Fiscal Year.

Community Outpatient Penetration Rates - General Population by RSN. Youth (0-17 yrs.)
